

Integration Test API Github repos

1-In this case I'm going to request the repos of the following account HenriqueGuim that has 13 public repos but only 12 are not a fork.

The result:

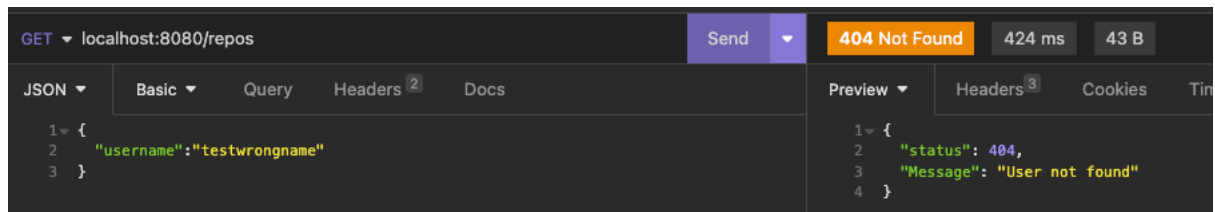

In the previous screenshot you can see that returned only 12 repos

```
{
  "name": "DupeExercise",
  "branches": [ ↵ 1 ↵ ]
},
{
  "name": "VeloScout_Fit_File_API",
  "branches": [ ↵ 1 ↵ ]
},
{
  "name": "BankApiExercise",
  "branches": [
    { ↵ 2 ↵ }
  ]
},
{
  "name": "MondayTrainingApp.",
  "branches": [ ↵ 1 ↵ ]
},
{
  "name": "MultiplayerRockPaperScissor",
  "branches": [ ↵ 1 ↵ ]
},
{
  "name": "ProducerConsumerExercise",
  "branches": [ ↵ 1 ↵ ]
},
{
  "name": "testing_dynamodb",
  "branches": [ ↵ 1 ↵ ]
},
{
  "name": "SnakeGame",
  "branches": [ ↵ 1 ↵ ]
},
{
  "name": "DungeonsAndTrolls",
  "branches": [ ↵ 22 ↵ ]
},
{
  "name": "CardMonster2.0",
  "branches": [ ↵ 1 ↵ ]
},
{
  "name": "ChatWithCommandLines",
  "branches": [ ↵ 1 ↵ ]
},
{
  "name": "TranslatorApi",
  "branches": [ ↵ 11 ↵ ]
}
```

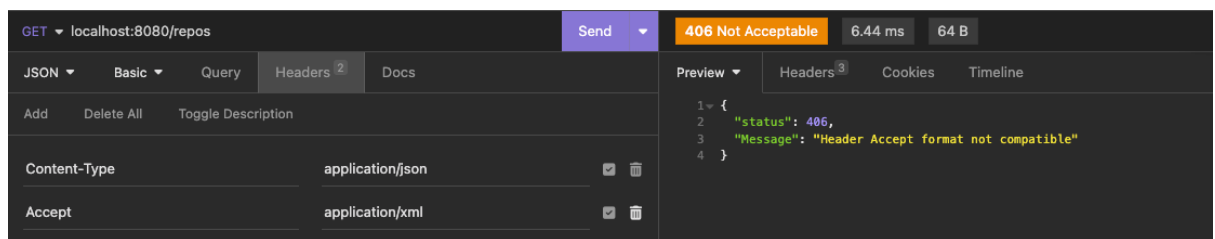

All the branches were retrieved.

2-Trying a wrong user name:

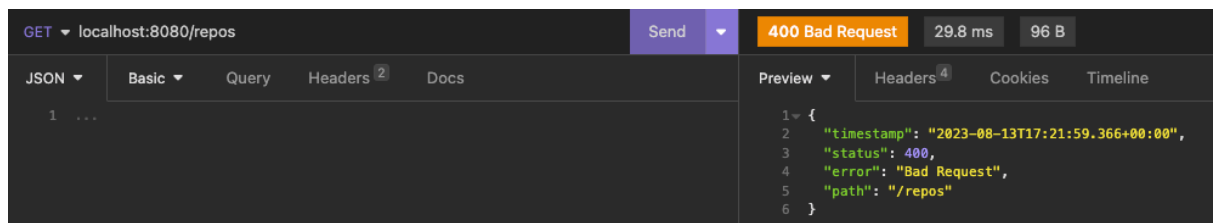

As expected returned a 404 status code with a message of user not found.

3-Trying a wrong accept parameter:

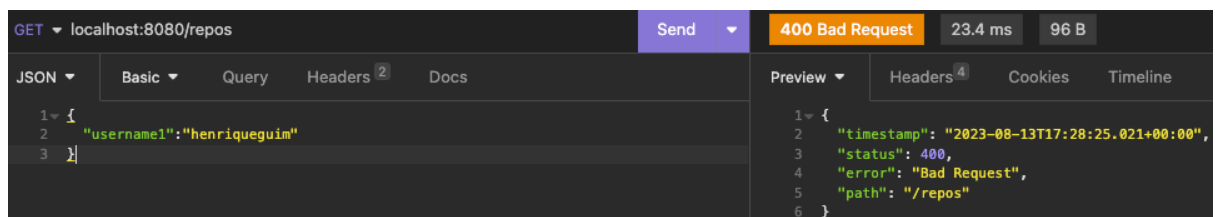

As expected returned a 406 status code with a message of Accept format not compatible.

4-Not sending a request body:

As expected returned a 400 status code with a error message of bad request.

5-Sending a wrong request body:

6-Making something going wrong internally in this case missing the credentials:

GET localhost:8080/repos Send 500 Internal Server Error 627 ms 43 B

JSON Basic Query Headers 2 Docs Preview Headers 4 Cookies Timeline

```
1 {
2   "username": "henriqueguim"
3 }
```

```
1 {
2   "status": 500,
3   "Message": "Internal Error"
4 }
```

It didn't show the reason on the return body, but it logs the reason internally:

```
